

Which Xamarin approach is best for your app?

Xamarin provides two ways to build great, native apps. Xamarin.Forms maximizes code sharing, while Xamarin.iOS and Xamarin.Android provide direct access to platform-specific APIs.

Use this guide to choose the best approach for your app. Either way, you'll get fully native apps with shared business logic – fast.

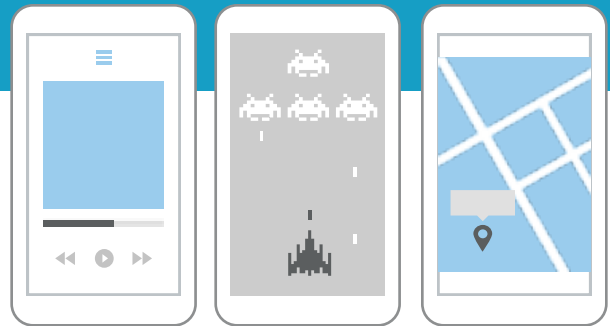

Xamarin.Forms is best for:

Apps with common interactions across device platforms

Apps where code sharing is more important than custom UI

Apps that require little platform-specific functionality

Learn more: xamarin.com/forms

Xamarin.iOS / Xamarin.Android is best for:

Apps with interaction that require native behavior

Apps that use many platform-specific APIs

Apps where custom UI is more important than code sharing
